

CLAIMS

1. A primer composition for coating comprising:

a polymer (A) having a unit of a (meth)acrylic ester monomer
(a) in which acryloyloxy group or methacryloyloxy group is bonded
5 to secondary carbon atom or tertiary carbon atom.

2. The primer composition for coating according to claim 1, wherein
the (meth)acrylic ester monomer (a) comprises an alicyclic
hydrocarbon group.

3. The primer composition for coating according to claim 1, wherein
10 the (meth)acrylic ester monomer (a) comprises at least one
substituent selected from the group consisting of cyclohexyl group,
4-t-butylcyclohexyl group, isobornyl group, tricyclodecanyl group,
and 3, 3, 5-trimethylcyclohexyl group.

4. The primer composition for coating according to claim 1, wherein
15 the (meth)acrylic ester monomer (a) comprises at least one
substituent selected from the group consisting of t-butyl group
and t-amyl group.

5. The primer composition for coating according to claim 1, wherein
the polymer (A) is a copolymer comprising a unit of a (meth)acrylic
20 ester monomer (a) and a unit of another monomer (b).

6. The primer composition for coating according to claim 1, further
comprising:

another polymer (B) different from the polymer (A).

7. The primer composition for coating according to claim 6,
25 wherein the polymer (B) is a polyolefin resin.
